

Paddock Master (Grass Harrows - Groundcare)

OVERVIEW

The Paddock Master harrow is specifically designed to work with compact tractors. Once the drawbar and depth wheel option has been fitted it quickly converts into a trailed harrow that can be used behind rough terrain vehicles, quad bikes, or large ride on mowers.

It is used to remove dead matter and thatch from fields, which make the Paddock Master harrow AgriMetal for school fields. This helps improve the nutrient uptake and healthy growth, whilst breaking up manure and mole hills. The wheels give it a set height control and three spring tines rows have adjustable angle settings; this varies the aggression. A large turn buckle controls the trailed harrow. The buckle lowers the frame into the required working position even as it sets the tines level.

FEATURES

- 3 Rows Hardened Steel Spring Tines

- Adjustable Tine Aggression
 - Height Adjustable Depth Wheels with Gauge
 - Cat 1 & 2 (3 Point Linkage)
 - Towable
-
- Parking Stands
